DHARA RUPAREL

AI/ML Engineer | Generative AI & LLM Developer

dhararuparel16@gmail.com | +91 6352732968 | linkedin.com/in/dhara-ruparel | dhara-ruparel.vercel.app | github.com/dhararuparel

Ahmedabad, Gujarat

SUMMARY

Computer Engineering graduate with hands-on industry experience in AI systems evaluation, LLM benchmarking, and Python development. Experienced in evaluating AI agents through Terminal-Bench and Sentinel benchmarks, developing benchmark tasks, designing verification tests, analyzing model failures, and assessing solution correctness and reliability. Skilled in Python, Machine Learning, NLP, and Generative AI, with practical experience building AI-powered applications and integrating LLM APIs. Focused on improving AI agent performance, evaluation quality, and the reliability of intelligent systems.

WORK EXPERIENCE

AirDawg Labs (Caudal AI Labs Pvt. Ltd.), *AI Systems Evaluation Intern* 07/2026 – 10/2026 | Remote

- Developed and refined benchmark tasks for Terminal-Bench and Sentinel to evaluate AI agents on complex, real-world problem-solving scenarios.
- Designed and validated test cases, verification scripts, and evaluation criteria to assess solution correctness, agent performance, and task reliability.
- Analyzed benchmark results and model failure patterns to identify task weaknesses and improve evaluation quality and reproducibility.
- Reviewed task instructions, test integrity, and solution validation to ensure benchmark submissions met quality standards.

EDUCATION

Bachelor of Engineering (Computer Engineering), *LDRP Institute of Technology and Research, Gandhinagar* 2022 – 2026
CPI: 8.55 / 10

TECHNICAL SKILLS

Languages
Python, SQL, JavaScript, HTML, CSS

Cloud & Dev Tools
Git, GitHub, REST APIs, OAuth, Render, Cloud Deployment

AI/ML & GenAI
Generative AI, LLMs, RAG, NLP,Computer Vision, Deep Learning,Prompt Engineering, AI Agents

Frameworks & Libraries
Flask, Django, Scikit-learn, TensorFlow, Pytorch, OpenCV, Pandas, NumPy, FAISS

Databases
PostgreSQL, Supabase, SQL

CERTIFICATIONS

- NPTEL – Python for Data Science
- NPTEL – Enhancing Soft Skills and Personality
- TCS iON – Career Edge: Young Professional Program
- Institute of Plasma Research (IPR) – Project Completion Certificate

PROJECT EXPERIENCE

Lexara AI – LLM Powered RAG Knowledge Platform | Live Demo
- Tech Stack : Python, Flask, FAISS, Gemini 2.5 Flash, Supabase, Render
- Developed a production-ready Retrieval-Augmented Generation (RAG) platform enabling conversational querying across PDFs, DOCX files, websites, and YouTube content.
- Designed document ingestion and semantic indexing pipelines using vector embeddings and FAISS for efficient knowledge retrieval.
- Integrated Gemini LLM APIs to generate context-aware responses grounded in retrieved information.
- Implemented user authentication, analytics dashboards, and cloud deployment to support scalable multi-user access.
- Reduced manual document search effort through semantic retrieval and natural language interaction.

MotionGuard – AI-Powered Surveillance & Motion Detection System | Github
- Tech Stack : Python, Flask, OpenCV, PostgreSQL
- Designed and developed a real-time computer vision system for motion detection and automated surveillance using OpenCV and Python.
- Built RESTful APIs with Flask and integrated PostgreSQL for event logging, monitoring, and surveillance data management.
- Optimized image-processing pipelines to improve detection accuracy, reduce latency, and enhance real-time performance

EmoSense – AI-Powered Emotion Recognition System | Github
- Tech Stack : Python, Flask, Next.js, Streamlit, Scikit-learn, TF-IDF, NLTK, Pandas, NumPy, JavaScript
- Developed a real-time emotion recognition system to classify text, voice, and facial inputs into 7 emotional states.
- Built a 7-class machine learning model using Logistic Regression, TF-IDF, and custom NLTK-based text preprocessing.
- Engineered a unified prediction pipeline combining textual, acoustic, and facial features for emotion profiling and analytics.

ACHIEVEMENTS

- Designed, developed, and deployed **Lexara AI**, a production-ready RAG platform supporting conversational querying across PDFs, DOCX files, websites, and YouTube content using LLMs, semantic search, and vector retrieval.
- Developed multiple end-to-end AI applications across **Generative AI, Computer Vision, Workflow Automation, and Backend Engineering**, demonstrating full-stack AI development capabilities.
- Achieved a **CPI of 8.55/10** in Bachelor of Engineering (Computer Engineering) while actively working on industry-oriented AI projects and internships.
- Successfully completed internships at **iTechBrains Pvt. Ltd.** and **TatvaSoft Pvt. Ltd.**, gaining practical experience in backend development, database management, REST APIs, and software engineering practices.
- Successfully deployed and maintained **AI-powered web applications** using cloud deployment platforms, demonstrating end-to-end product development and delivery capabilities.
